

The Rebellion

Fists of the Fallen City

**A Face Paced 2d Side Scrolling Brawler that lets you fight back against
Corrupt private security force.**

Executives Sections

The Pitch

The Rebellion first of the Fallen city is a Fast-paced 2D side-scrolling brawler where players fight through urban districts overtaken Rush a corrupt private Security Force. The game blends classic beat-'me-up mechanics with modern combo systems character progression, and dynamic enemy behaviours. Take control of Zed and fight your way through Fallen to get it back.

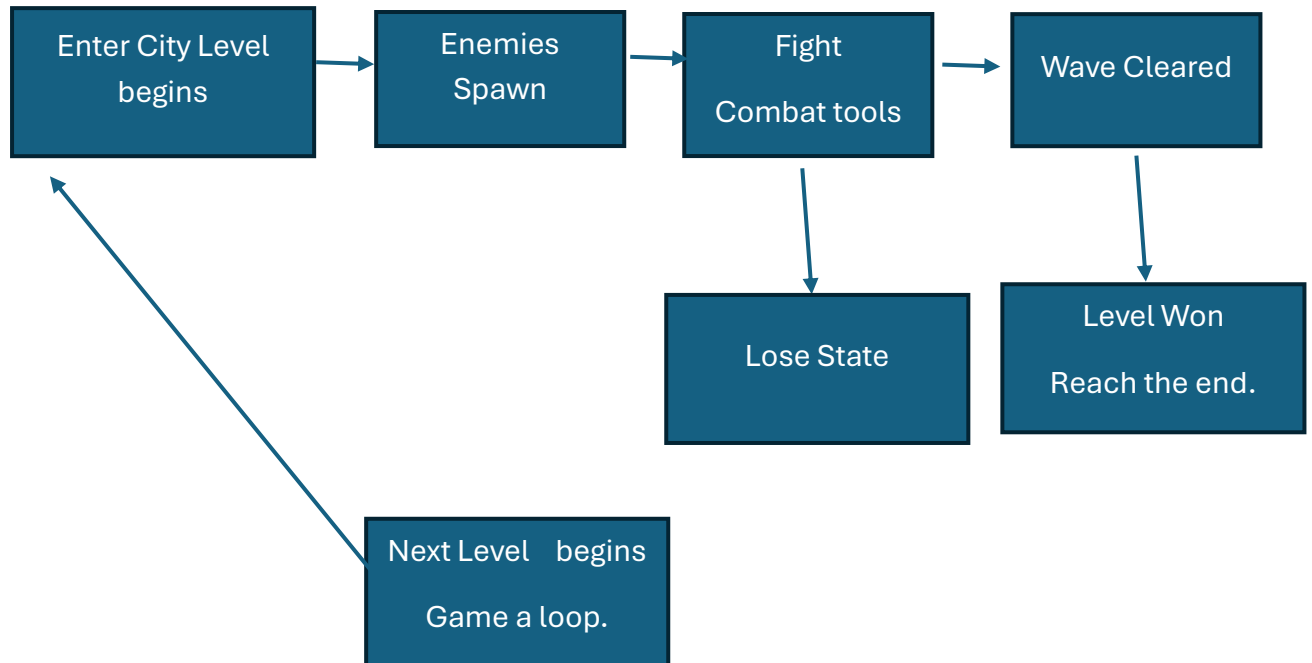

The 3 Pillars of Game Play

Impactful, Fast-paced combat	Skill depth through combos and Defence	Wave-clearing under pressure
Punchy hits" with light and heavy attacks and pick-up objects, in a fast 2D side-scrolling brawl.	Combos and Juggle routes" on offense, plus block, dodge, and parry on defence.	Enemies spawn in waves, and the player must "Defeat Wave / Clear Arena to win the level in time frame", tracked by the Timer Agent.

The Win and Lose conditions.

<u>Win conditions</u>	<u>Lose conditions</u>
Fight you way to the end of the level while beating Rust Enemies	Get knocked out by health bar or if time runs out

Core Loop of the game.

Game Mechanics -what the players does.

- Impactful Combat – punchy hits Players moves into an Areas were light and heavy pick-up objects.
- Combos and Juggle routes
- Defensive tools(block dodge, parry)
Enemies spawn to fight.
- Defeat Wave / Clear Arena to win the level in time.

AI Architecture Team

<u>Agent</u>	<u>Development role</u>	<u>Gameplay Effect</u>
Player Mechanics agent	Movement, jump, input handling	The player moves and feels responsive
Player combos Agent	One state machine for attacks, combos, cancel windows, hit stun	Light and heavy attacks chain into combos
Enemy Agent	Control the A.I Enemies	This will control the Enemies in the game
Game State Agent	Win check, lose state, time-out result, retry	Clear the arena to win; fail and retry have rules
Wave Spawner	Win check, lose state, time-out result, retry	Difficulty comes from how waves arrive
Asset & Animation Lead	Sprite source, animation list, hit stop and feedback	Punchy hits" and readable telegraphs
Health & Hitbox Agent	Owns health, damage values, and hitbox/hurt box data	Hits land, damage registers, the player can die
Camera & Bounds Agent (new)	Arena camera lock, world bounds, unreachable-enemy failsafe	Prevents the off-screen soft lock
Menu & UI Agent	Builds and owns every screen and on-screen element the player sees outside the arena action	The player can start a game, read the state of the fight, and see why they won or lost

Technical Strategy

<u>Agent</u>	<u>Technical constraint</u>	<u>Desponds On</u>	<u>Budget</u>
Player Mechanics	Sprite animations for idle, walk, jump; input handling	Asset & Animation Lead	Token coast to make at least one character to move two hundred tokens
Player combos Agent	One state machine for attacks	Player Mechanics	Token Cost to make the combos work 200 tokens
Health & Hitbox Agent	Shared damage, health, and hitbox data that every agent reads	None	Size is medium so medium
Enemy Agent	Chase and attack behaviour, attacker cap, one enemy type first	Health & Hitbox, Asset & Animation Asset & Animation	It is large as it will run the enemy note
Game State Agent	Win check, lose state, time-out result, retry	Health & Hitbox Agent	Medium cost of token
Wave Spawner	Spawn triggers, rate, cap, and positions	Enemy Agent	
Asset & Animation Lead	Sprite source, animation list, hit stop, and feedback	None	Large as it runs the Animation

Camera & Bounds Agent (new)	Arena camera lock, world bounds, unreachable-enemy failsafe	Wave Spawner	
Menu & UI Agent	HUD (health, timer), win/lose screens, menus	Game State, Health & Hitbox	Medium Token use as well

Game Engine

Phaser

Why Phaser is use for the game building for now.

- **2D side-scrolling:** Phaser is built for 2D and has Arcade physics, sprite animation, and input handling.
- **Prototype goal:** the GDD says Phaser is for "creating a playable prototype". It runs in the browser with no install, so playtesting and sharing a build are easy.
- **AI-assisted build:** the Technical Strategy budgets in tokens, which suggests AI agents write the code. Phaser uses JavaScript or TypeScript, which AI agents oversee well, and it has plenty of documentation and examples.
- **Small scope:** Tier 0 is one character, one enemy type, waves, and a timer. Phaser manages that without much **setup**.
